## Online iPrints Store for Mobile Artists

Following the recent LA Mobile Arts Festival 2012, iPhoneArt.com has opened its online iPrints Store to the general public. The newly expanded service gives iPhoneographers the ability to display their images on a curated space or have them printed with the quality necessary to appeal to art buyers. It also serves as a sales platform for IPA's mobile artists. Mobile art images can now be printed on a number of high-quality surfaces, including handcrafted bamboo panels, specially coated aluminum plates, glass and mirrors. ## PictureCode's Advanced RAW Workflow

PictureCode recently released Photo Ninja, a professional-grade RAW converter that combines the functionality of a workflow RAW file converter with the company's popular Noise Ninja application. Designed in collaboration with professional photographers, the program features advanced de-mosaicing, adaptive lighting, highlight recovery, detail enhancement, color enhancement, black-and-white processing and chromatic aberration correction. It also includes color-correction tools, distortion correction and the company's proprietary Noise Ninja 3.0 technology. Company founder Jim Christian believes the new workflow RAW application will soon gain the same acceptance as the company's original Noise Ninja. Price: \$129.
